## Index Number of Iowa Farm Products Prices<sup>1</sup>

By GERTRUDE M. COX

The present Iowa farm price index has been in use since 1926. It is widely employed as a measure of the general level of Iowa farm prices and appears each month in the price barometer published in *Agricultural Economic Facts*<sup>2</sup>. A few years ago Peck<sup>3</sup> developed a farm lease, known as the sliding scale lease, in which the rental payments are based on and vary with the changes in the index number. More recently, contracts covering land sales have been devised in which the interest payments and in some cases also the principal payments are based on this farm price index<sup>4</sup>.

The enactment of the Agricultural Adjustment Act, May, 1933, has occasioned much current interest in parity price which is now computed each month for Iowa and also appears in *Agricultural Economic Facts*. In the computation of a parity price for the state, it is necessary to have an index of Iowa farm prices. These uses to which the index is put illustrate both the growing interest in such an index and the importance of the greatest possible accuracy in its construction.

The statistical data required to determine the weights<sup>5</sup> used in computing the index have been considerably improved since 1926<sup>6</sup>. Perhaps more important has been the shift in the relative amount of income Iowa farmers receive from the different farm products sold. The income from hogs has increased in significance until the state is becoming more and more a specialized center for hog production. The cash income from corn has decreased, because farmers are using more of their corn

for feed. Cattle have been decreasing, while poultry and eggs are increasing as important sources of income. With better, and in some cases, additional statistical data available and owing to several important changes in farm production since 1920 to 1924, the period used by Bjorka, the revision of the index appears warranted.

### Index Numbers of Iowa Farm Products Prices

The index number, presented in this bulletin, has been designed to serve as a composite measure of the price change of Iowa farm products from month to month and over a period of years. The annual and monthly index numbers, from 1910 to date, are given in tables 1 and 2.

TABLE 1. ANNUAL INDEX NUMBER OF  
IOWA FARM PRODUCTS PRICES  
(1910-1914 = 100)

Year	Index	Year	Index	Year	Index
1910 .....	103	1919 .....	220	1928 .....	141
1911 .....	87	1920 .....	188	1929 .....	146
1912 .....	98	1921 .....	107	1930 .....	127
1913 .....	104	1922 .....	114	1931 .....	86
1914 .....	107	1923 .....	113	1932 .....	55
1915 .....	100	1924 .....	119	1933 .....	57
1916 .....	120	1925 .....	150	1934 .....	74
1917 .....	182	1926 .....	146		
1918 .....	209	1927 .....	139		

The annual index number is based on the annual averages of Iowa farm prices. This index, table 1, reached a peak of 220 in 1919, while its lowest value was 55 in 1932. The monthly index number, table 2, is based on the monthly Iowa average farm prices. This index number was 125 in March, 1935. The meaning is that the prices of Iowa farm products were then, on the average, 25 points above what they were during the 5 years,

1910 to 1914. The index number is kept up to date and issued each month for the use of those interested in Iowa's agricultural prices. The details concerning its construction are given in later sections of this bulletin.

The monthly index number is shown graphically in fig. 1. From 1910 to 1916, the index number, while fluctuating, kept within the range of 78 to 116. This period of rather stable prices was

\*Agricultural Economic Facts, issued by the Ag. Econ. Section of the Agr. Ex. Service of Iowa State College, Ames, Iowa.

followed by one of rapidly rising prices during the war until the index reached a peak of 242 in July, 1919. Then came a correspondingly rapid decline in prices. After 1922 there was a gradual rise up to 1925. During the following years, to and including 1929, the prices of farm products changed very little. After 1929 the trend of prices was downward until the price index reached 40 in January, 1933. For the last 2 years there has been a fairly steady increase in farm prices of Iowa products.

### Farm Prices of 10 Iowa Products

The basic data for the Iowa farm products price index are tabulated in table 8. This table gives the monthly prices of 10 Iowa products from 1910 to 1934. These represent the average prices (as of the fifteenth of the month) received in local markets by producers. The prices at the local markets are collected, adjusted and averaged by the Division of Crop and Livestock Statistics of the United States Bureau of Agricultural Economics.

From the monthly prices in table 8 there was first computed an annual farm price for each commodity. As an example of the calculations, that for hogs in 1934 is given.

Month	Price from table 8	Percentage or Weight from table 6	Price $\times$ percentage
January .....	2.85	12.6	35.91
February .....	3.80	10.5	39.90
March .....	3.80	8.6	32.68
April .....	3.40	6.8	23.12
May .....	3.00	7.3	21.90
June .....	3.60	8.0	28.80
July .....	4.00	7.4	29.60
August .....	4.85	6.5	31.52
September .....	6.20	5.9	36.58
October .....	5.10	6.2	31.62
November .....	5.10	8.4	42.84
December .....	5.10	11.8	60.18
Total		100.0	414.65

The monthly prices from table 8 are set down in the second column. In the next column, copied from table 6, is a list of weights whose derivation will be explained later. Each price is multiplied by the corresponding weight, the results are summed, and

the total divided by 100. The result, \$4.15, the 1934 weighted mean price for hogs, is entered in table 3.

### Price Relatives of Iowa Farm Products

The next step is the conversion of the actual monthly and annual prices into price relatives; that is, into percentages of a pre-determined base price. A convenient base period is that covering the 5 years, 1910 to 1914. During that period of relatively stable prices there was an approach to an equilibrium among farm prices and between agricultural and non-agricultural prices. The recognition of this fact led to the adoption of these years as the base both for the United States price index number and for the Iowa Farm Products Prices index which has been in use since 1926.

The average prices of 10 Iowa farm products during the 1910 to 1914 base period were computed by Bjorka<sup>8</sup>. They are as follows:

Hogs .....	\$7.3040 per 100 lbs.
Cattle .....	6.3880 per 100 lbs.
Sheep .....	4.5100 per 100 lbs.
Corn .....	0.5285 per bushel
Oats .....	0.3448 per bushel
Wheat .....	0.8504 per bushel
Hay .....	9.8220 per ton
Butter .....	0.2542 per lb.
Eggs .....	0.1692 per doz.
Poultry .....	0.0979 per lb.

On the basis of these averages, the monthly and annual price relatives were calculated and recorded in tables 9 and 4. As an example, the relative for hogs in January, 1910, was

$$\frac{(100) (\$7.80)}{\$7.3040} = 107,$$

the hog price, \$7.80, for January, 1910, being taken from table 8.

<sup>8</sup>Bjorka, Knute. Index number of Iowa farm products prices. Current Economic Series Report No. 3, June, 1926.

TABLE 3. WEIGHTED ANNUAL FARM PRICES OF  
TEN IOWA PRODUCTS

Year	Hogs	Cattle	Sheep	Corn	Oats	Wheat	Hay	Butter	Eggs	Poultry
1910	8.15	5.84	5.02	.49	.33	.93	8.61	.26	.18	.098
1911	6.22	5.58	4.03	.48	.34	.83	10.28	.22	.14	.086
1912	6.78	6.20	4.16	.57	.36	.86	11.16	.26	.18	.095
1913	7.64	7.03	4.56	.52	.33	.79	9.07	.27	.16	.108
1914	7.65	7.34	4.81	.61	.35	.83	9.96	.26	.18	.108
1915	6.47	6.96	5.11	.64	.41	1.03	10.52	.26	.18	.107
1916	8.57	7.76	6.38	.71	.39	1.13	8.95	.29	.21	.132
1917	14.32	9.77	9.59	1.32	.58	2.06	13.14	.37	.30	.159
1918	16.38	11.75	10.46	1.33	.70	2.01	17.13	.44	.33	.198
1919	16.71	12.37	9.14	1.41	.63	2.03	18.32	.53	.37	.207
1920	12.96	10.21	7.54	1.16	.67	2.11	19.13	.56	.40	.216
1921	7.62	6.45	4.11	.40	.27	1.04	10.89	.36	.23	.178
1922	8.45	6.89	5.57	.48	.28	.94	9.66	.33	.22	.162
1923	6.93	7.33	6.29	.68	.34	.90	11.23	.41	.23	.158
1924	7.34	7.42	6.82	.84	.42	1.08	12.34	.39	.22	.172
1925	11.00	8.49	7.46	.90	.38	1.41	11.23	.41	.26	.180
1926	11.60	7.99	6.89	.61	.34	1.28	13.97	.42	.26	.197
1927	9.54	8.97	6.56	.74	.41	1.22	13.38	.44	.21	.180
1928	8.55	10.90	6.96	.81	.42	1.08	12.04	.46	.25	.200
1929	9.41	10.80	6.52	.78	.39	1.07	11.44	.46	.26	.194
1930	8.80	9.17	4.67	.70	.33	.77	9.31	.36	.19	.154
1931	5.64	6.50	2.88	.43	.21	.44	8.29	.27	.14	.137
1932	3.20	4.95	1.98	.23	.15	.37	7.56	.20	.107	.095
1933	3.33	4.34	2.25	.27	.22	.69	5.36	.21	.106	.075
1934	4.15	4.96	2.78	.57	.39	.88	11.16	.24	.130	.103

As a second example, the relative for hogs for the year 1910 was

$$\frac{(100) (\$8.15)}{\$7.3040} = 112,$$

the annual hog price, \$8.15, being taken from table 3.

The monthly price relatives for hogs, cattle and sheep are shown graphically in fig. 2; for corn, oats and wheat in fig. 3; and for butter, eggs and poultry in fig. 4.

### Weights of Iowa Farm Products Prices

The prices of 10 different products cannot be directly combined into an index because: Hogs, cattle and sheep prices are quoted on a hundredweight basis; corn, oats and wheat in bushels; butter and poultry in pounds; eggs in dozens and hay by the ton. Obviously these units of measurement are not comparable. To combine the price of a ton of hay with the price of a dozen of eggs

TABLE 4. ANNUAL PRICE RELATIVES OF  
IOWA FARM PRODUCTS  
(1910-1914 = 100)

Year	Hogs	Cattle	Sheep	Corn	Oats	Wheat	Hay	Butter	Eggs	Poultry

1932 .....	44	77	44	44	44	44	77	79	65	97
1933 .....	46	68	50	51	64	81	55	83	65	77
1934 .....	57	78	62	108	113	103	114	94	77	105

in order to derive an average price for the two commodities gives a meaningless figure. Moreover, even though the unit quantities were comparable, it still would not be reasonable to combine the prices by simple addition because the total amount of income farmers derive from the sales of different farm products vary so widely. Wheat in Iowa cannot be allowed to influence the price index as much as corn, although both are quoted in bushels. Therefore, a system of weighting is essential. In view of the purpose and use that is to be made of the index under discussion, these weights are based upon the proportion of the Iowa farm income obtained from each of the products employed. For the construction of annual weights, farm income data are sufficiently complete, but to determine the monthly weights for each product within the year, farm income statistics at present are inadequate:

accordingly, recourse to the volume of movement of the respective products in the channels of trade is necessary.

It is easy now to explain the reasons for the use of the particular 10 products listed on page 303. Two considerations led to their selection; (1) Because they are important sources of farm income in the state, and (2) because pertinent statistics, both monthly and annual are available. The income derived from various farm products is displayed in table 10. In table 11 these figures are reduced to percentages of annual income. It is clear that the 10 selected products dominate the income figures. In fact, they contribute 96 percent of the total income from Iowa farm products. An additional classification, "Fruits and Vegetables" would have added nearly 2 percent to this total but could not be included because no corresponding farm price series was available.

The next problem was to determine a representative 5-year period upon which to base the relative importance of the products. Since there are well-defined differences in the long-time trends of these figures for the several commodities, the period should be as recent as possible. In order to be representative, however, it must avoid the dislocations due to the depression. After careful examination of several 5-year periods, that from 1925 to 1929 was chosen as representative of the recent normal conditions. In table 5 are recorded the incomes of the 10 selected Iowa farm products for these years. In the last column

TABLE 5. ANNUAL CASH INCOME FROM 10 IOWA FARM PRODUCTS WITH CORRESPONDING WEIGHTS  
1925-1929

Product	Cash income, in thousands of dollars.						Income
	1925	1926	1927	1928	1929	Total	Weight

Fig. 2. Monthly price relatives of hogs, cattle and sheep, 1910 to 1934, inclusive.

Fig. 3. Monthly price relatives of corn, oats and wheat, 1910 to 1934, inclusive.

Fig. 4. Monthly price relatives of butter, eggs and poultry, 1910 to 1934, inclusive.

are the percentages of each product income compared with the total income. These percentages constitute the annual weightings to be applied to the annual price relatives of the several products in computing the annual index.

Since monthly farm income data are inadequate for the 1925 to 1929 period, data on the volume of shipment and marketing of the respective products were used to estimate monthly income. Leslie M. Carl, of the United States Department of Agriculture, Bureau of Agricultural Economics, Division of Crop and Livestock Estimates at the Des Moines, Iowa, Office, in a mimeographed bulletin, "Livestock in Iowa Agriculture," has collected and tabulated the number of head of hogs, cattle and sheep marketed monthly from Iowa farms through public livestock markets

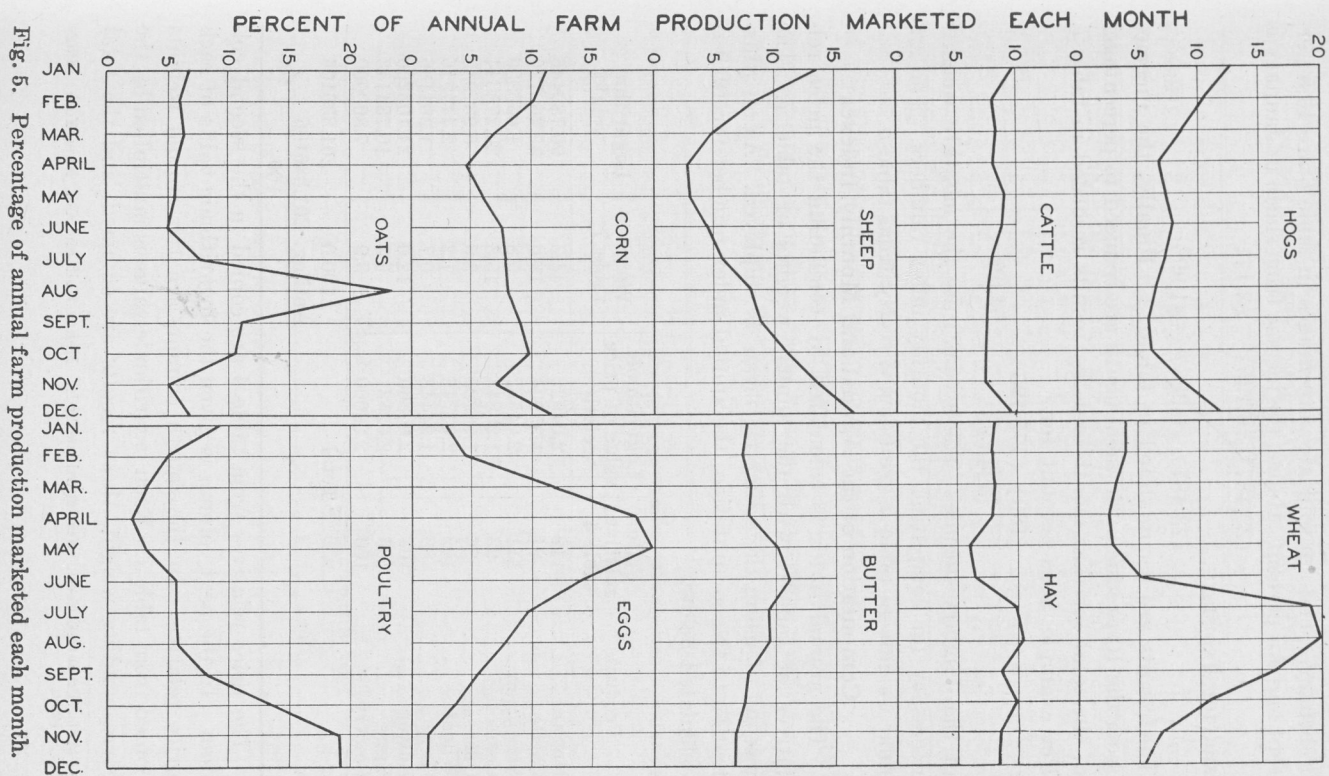

or direct to packers. These records are given in tables 12, 13 and 14. Ronald C. Bentley's tabulations of the monthly marketings of Iowa's commercial corn and oats are given in tables 15 and 16. Data on the Iowa marketing of wheat and hay were not available, but the United States' percentages for 1925 to 1929 give some check on the wheat and hay monthly marketings. These percentages are given in tables 17 and 18. The receipts of Iowa butter, eggs and poultry at four leading markets are reported in Crops and Markets. These data are given in tables 19, 20 and 21. The average percentages of these 10 products marketed each month are given in their respective tables (tables 12 to 21) and accumulated in table 6.

The seasonal variation in percentage of products marketed from month to month is shown in fig. 5. Approximately 23 percent of the oats produced each year is shipped during August. Over 55 percent of the wheat is sold during July, August and September. A large percentage of the yearly egg production is sold during the spring, while 38 percent of the poultry is marketed in the winter.

The last step in the computation of the monthly weights may now be described. The total income for each product in table 5 is to be distributed over the 12 months in proportion to the percentages in table 6. Consider, as examples, the portions of the income from sheep, \$23,487, to be assigned to January and

TABLE 6. PERCENT OF ANNUAL FARM PRODUCTION  
MARKETED EACH MONTH

	Hogs	Cattle	Sheep	Corn	Oats	Wheat	Hay	Butter	Eggs	Poultry

## 310

February. The appropriate percentages in table 6 are 13.5 percent and 8.5 percent. Hence, the income from sheep in January is

$$(23,487) (0.135) = \$3,171$$

and for February,

$$(23,487) (0.085) = \$1,996$$

The results are accumulated in table 22. Finally, the incomes from the 10 products for each month are reduced to percentages of the total for that month and the results recorded in table 7. For example, hogs account for

$$\frac{(100) (175,196)}{324,696} = 54.0\%$$

of the January income. These constitute the monthly weights necessary for computing the monthly index numbers. The annual weights in table 7 are taken directly from table 5.

### Computation of the Annual and Monthly Indexes

The annual index is calculated by combining the price relatives of table 4 with the annual weights of table 7. The method of using the geometric mean<sup>9</sup> is employed. As an illustration of the computation, the annual index number for 1910 is calculated below.

Product	Price relative table 4	Logarithmic value of price relative	Weight table 7	Logarithm $\times$ weight
Hogs.....	112	2.04922	44.3	90.780446
Cattle.....	91	1.95904	18.0	35.262720
Sheep.....	111	2.04532	0.8	1.636256
Corn.....	93	1.96848	10.3	20.275344
Oats.....	96	1.98227	3.5	6.937945
Wheat.....	109	2.03743	1.2	2.444916
Hay.....	88	1.94448	0.7	1.361136
Butter.....	102	2.00860	12.0	24.103200
Eggs.....	106	2.02531	5.3	10.734143
Poultry.....	100	2.00000	3.9	7.800000
Total			100.0	201.336106
			Antilog.	201.336106
				100
				= 103

The price relatives from table 4 are copied in the second column. In the next column is given the logarithmic value of each price relative. In the fourth column are the annual weights copied from table 7. Each logarithmic value is multiplied by the corresponding weight, these results are summed, and the total

<sup>9</sup>Mills, Frederick Cecil. Statistical methods. Henry Holt and Co., New York. Page 211. 1924.

TABLE 7. ANNUAL AND MONTHLY WEIGHTS EMPLOYED IN CALCULATING IOWA FARM PRICE INDEX (1925-1929)

Products	Annual	Jan.	Feb.	Mar.	Apr.	May	June	July	Aug.	Sept.	Oct.	Nov.	Dec.
Hogs .....	44.3	54.0	52.7	47.0	41.6	39.7	41.5	40.9	35.7	36.3	37.2	47.3	50.8

Sheep .....	0.8	1.0	0.7	0.4	0.3	0.3	0.4	0.5	0.8	0.9	1.1	1.3	1.2
Corn .....	10.3	11.1	11.9	8.9	6.7	7.3	9.1	10.1	10.2	13.2	13.7	9.4	11.7
Oats .....	3.5	2.2	2.3	2.7	2.7	2.4	2.1	3.3	10.0	5.3	4.9	2.2	2.3
Wheat .....	1.2	0.5	0.6	0.5	0.4	0.4	0.7	3.0	3.0	2.8	1.8	1.0	0.7
Hay .....	0.7	0.5	0.6	0.7	0.7	0.5	0.5	0.8	0.9	0.8	0.9	0.7	0.6
Butter .....	12.0	9.0	10.1	12.0	13.0	15.1	15.7	14.3	14.3	13.1	12.4	10.1	7.7
Eggs .....	5.3	1.4	2.6	7.5	13.5	12.9	8.6	6.3	5.1	4.1	2.6	1.0	0.7
Poultry .....	3.9	3.5	2.2	1.6	1.2	1.5	2.6	2.8	2.8	4.4	7.1	9.5	7.3
Total .....	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0	100.0

divided by 100 giving 2.013361. The antilogarithm of 2.013361 is 103, the 1910 index number as given in table 1.

The monthly index is computed in a similar manner, the relatives being taken from table 9 and the monthly weights from table 7. To illustrate, the index number for December, 1934, is calculated.

Product	Price relative table 9	Logarithmic value of price relative	Weight table 7	Logarithm $\times$ weight
Hogs.....	70	1.84510	50.8	93.731080
Cattle.....	78	1.89209	17.0	32.165530
Sheep.....	64	1.80618	1.2	2.167416
Corn.....	170	2.23045	11.7	26.096265
Oats.....	154	2.18752	2.3	5.031296
Wheat.....	116	2.06446	0.7	1.445122
Hay.....	160	2.20412	0.6	1.322472
Butter.....	114	2.05690	7.7	15.838130
Eggs.....	146	2.16435	0.7	1.515045
Poultry.....	110	2.04139	7.3	14.902147
Total			100.0	194.214503
			Antilog. 194.214503	= 88
			100	

In table 2, the index number for December, 1934, is recorded as 88.
